

CodeGenerator^{xp}

Productivity tool for Multitier-Applications with Visual Basic 6.0, COM+, SQL Server 7 / 2000

Accelerates development of Multitier-Applications

The newest version of our generator for multitier application development with Microsoft® Visual Basic® 6, Microsoft® COM+ and Microsoft® SQL Server makes the development of multitier applications extremely easy. **CodeGenerator XP** shortens the time to develop perfect multilevel applications drastically.

Assume the time, you normally need to implement the most important functionality for the access to tables (reading, modifying, inserting and deletion),

will be shortened from days to minutes!

With **CodeGenerator** from **IPS & Co.** you can say goodbye to repeating and annoying tasks.

CodeGenerator completes coding intensive tasks for you

With a few clicks in a wizard in **CodeGenerator** and you can complete the coding intensive work of

- *error free* creation of Stored Procedures (reading, modifying, inserting and deletion) in the Microsoft® SQL server and
- *error free* coding of the methods (reading, modifying, inserting and deletion) of ActiveX components for the Business Layer in Microsoft® COM+

within just a few minutes! Create the table definitions in Microsoft® SQL Server 7 or 2000 and let the **CodeGenerator** do the remaining work. Select whether only some Stored Procedures and/or COM+ methods should be generated and copied to file or clipboard, or whether you would like to generate all Stored Procedures and the whole COM+ class.

Of course the generated (and also commentated) program code corresponds completely to Microsoft® coding guidelines and naming conventions.
